

# A0127 Multi-Zone Control

This white paper outlines the use of a C-1201 IR distribution hub to be used to wire a single A0127 IR keypad to control multiple zones of an A4603 or an A4623 Audio Matrix.

Please refer to the below wiring diagram. In summary, you will be taking Power (+), Signal (S) and Ground (-) from a single A0127 keypad and using the C-1201 to distribute these same connections to each keypad input you wish to control from a single point. This is useful if you want to control say zones one, two, and three for a larger zone that requires more speakers, while still retaining individual control of the other zones with separate A0127 keypads. The below diagram shows a single keypad controlling 3 zones (6 speakers).

**Insert into A4623 Keypad inputs**
